MILESTONE:

A milestone is a specific point within a project's life cycle used to measure the progress toward the ultimate goal. Milestones in project management are used as signal posts for a project's start or end date, external reviews or input, budget checks, submission of a major deliverable, etc. A milestone is a reference point that marks a significant event or a branching decision point within a project. While the final deliverable or product is indeed a significant milestone, there are several other milestones that will help you move smoothly toward the final goal. An example of a milestone in project management could be any of the following:

- The beginning and end dates for project phases
- Getting approval from a stakeholder that allows you to move to the next phase
- Key deliverables, meetings, or events

ACTIVITY LIST:

The project management lifecycle is a step-by-step framework of best practices used to shepherd a project from its beginning to its end. It provides project managers a structured way to create, execute, and finish a project. This project management process generally includes four phases: initiating, planning, executing, and closing. Some may also include a fifth "monitoring and controlling" phase between the executing and closing stages. By following each step, a project team increases the chance of achieving its goals.
